Preparation Tips for 232 / Q3D Standards

Stability/Compatibility

1. Criteria for ≥ 4 years shelf-life **do not** apply to diluted working standards
2. Avoid osmium in HNO_3 , but trace HNO_3 ($\leq 5\%$ v/v) does not appear to affect data quality if measured immediately (daily standards)
3. Mercury and gold analyses challenging if matrix is HNO_3 (no chloride present)
4. Ensure Tl is sourced from oxide ($\text{Tl}_2\text{O}_3 = \text{Tl}^{+3}$) and not nitrate ($\text{TlNO}_3 = \text{Tl}^{+1}$)
